
EDUCATION

NASA Jet Propulsion Laboratory & Autonomous Systems Lab, ETH Zurich 05/2018
MSc Thesis: Disturbance Estimation and Rejection for High-Precision Multirotor Position Control. Supervision: Dr. Roland Brockers (JPL), Prof. Roland Siegwart (ASL ETH). - 12/2018

- Developed a recursive external wrench estimator and a disturbance-aware MPC controller to improve multirotor position control accuracy in the presence of strong external disturbances by up to 80% compared to a baseline PID controller [3];
- Applied the controller to achieve precision landing despite ground effect and severe wind.

ETH Zurich 2012-2018
BSc & MSc Mech. Eng. Focus on control systems, state estimation, autonomous systems.

WORK EXPERIENCE

Autonomous Systems Lab, ETH Zurich 04/2019
 Research Assistant. - 07/2019

- Improved accuracy and efficiency of evaluating visual-inertial odometry state estimation algorithms by developing an automated benchmarking pipeline and by integrating RTK-GPS state estimation to collect precise ground truth measurements (C++, Python, ROS);
- Enabled Swiss air rescue personnel to monitor live outputs of a deep-learning human detection pipeline running onboard a search-and-rescue UAV by developing a full-stack web UI (front end using vue.js, back end using express/node.js);

NASA Jet Propulsion Laboratory, California Institute of Technology 11/2017
 Visiting Researcher. Mobility and Robotic Systems, Computer Vision (347H). - 04/2018

- Developed and tested guidance, control and autonomy software for long-duration, fully autonomous operation of rotorcraft UAVs (C++, ROS);
- Enabled the first autonomous outdoor flights by improving the robustness of the flight controllers and of the autonomy logic, resulting in up to 4-hour fully autonomous missions;
- Quantified performance of vision-based pose estimation of recharging platform.

Automatic Control Laboratory, ETH Zurich 02/2017
 Student Researcher. Supervision: Prof. Maryam Kamgarpour. - 07/2017

- Developed a novel stochastic motion planning algorithm to generate safety-optimal aircraft trajectories in the presence of hazardous thunderstorms (MATLAB) [2].

PROJECT EXPERIENCE

AMZ Racing, ETH Formula Student Electric Team 2015-16
 Team Leader.

- Led ETH's world-record-breaking Formula Student team in the development of a state-of-the-art electric racecar, competing in the world's largest engineering competition;
- Team won *Formula Student Austria* and achieved 3 Engineering Design wins in 4 major European competitions; AMZ set WR for fastest-accelerating EV.

Battery Engineer. 2014-15

- Responsible for packaging, structural analysis and thermal management of the high voltage accumulator, using CAD, FEA and CFD software tools;
- Team won 2 out of 4 competitions, becoming Formula Student Electric World Champions.

SKILLS

(*** proficient, ** intermediate, * basic knowledge)
 Languages: C/C++***, Python**, JavaScript**, MATLAB/Simulink***, Bash**.
 Frameworks: ROS***, Vue.js*, Express.js*.
 Libraries: STL***, Eigen**, OpenCV*.
 CAD/CAE: Siemens NX, Ansys, CD Adapco StarCCM+.
 Spoken languages: English, French, German (all high proficiency), Luxembourgish (native).
